

LICORICE EXTRACT

From natural raw materials such as **gum arabic, agar agar, honey, agave syrup, licorice extract and waxes** to tailor-made qualities: Norevo offers natural products and functional ingredients along with technological know-how, development support and technical assistance.

Licorice Extract (succus liquiritiae) is the natural, concentrated juice obtained by water and steam extraction of the licorice roots (*Glycyrrhiza glabra* L.). Glycyrrhizin, the active component contained in the roots, is a strongly sweetening glycoside. Licorice extract is used for its flavouring, sweetening and de-bittering properties as well as for its natural colouring property.

TYPES AND QUALITIES

BLOCKS & POWDER

Traditional licorice types in blocks and spray-dried powders.

GRANULES

Fine, quickly-soluble granules.

LIQUID PASTE

Low-viscous, pumpable liquid. Available in standardized qualities or as customized blends (e.g. with ammonium chloride, flavors or sugar-reduced).

LOW-DUST POWDER

User-friendly licorice extract as a fine, low-dust powder, available in tailor-made qualities according to customer requirements.

Halal-certified, kosher and certified-organic.
